Setting up PunchOut

With PunchOut, you can access all the Unite platform features and broad assortment range from within your own ERP or e-procurement system. Unite can be integrated via OCI and cXML. It lets you access hundreds of pre-integrated, vetted suppliers in one place, while a safe and efficient data exchange is ensured between your system and Unite.

For more information about how PunchOut works, watch this video.

Two ways to integrate: OCI and cXML

Unite can be integrated via OCI and cXML, here you'll find all the technical information you need to set up PunchOut successfully.

How to use the basket-to-ERP solution

Unite's basket-to-ERP solution allows users who don't have ERP licences to access Unite and to create a shopping basket. Users can search for items, add items to a shopping basket and share the basket when they're done.
